

Tributary

The non-custodial capital automation layer for Solana

Raising \$250k Pre-Seed.

Money On-Chain Is Still Moved by Hand

Stablecoins are a **\$300B+** asset class.

Yet every financial action on-chain is **still manual**.

- Payments
- DCA
- Treasury management
- Yield allocation
- Agent spending

Every action requires a signature. Every signature requires a human.

On Solana, money has **no automation layer**.

Custody Is the Problem, Not the Solution

Most companies automate money by **taking custody**.

Instead of holding your funds, Tributary uses Solana-native delegation:

Approve once. Automate forever. Keep your keys.

An Automation Layer Native to Solana

One primitive powers every money motion:

Opportunities: Pay a subscription · DCA into an asset · Rebalance a treasury · stake idle capital · Fund an AI agent · route yield across protocols · many more

Define rules once. The protocol executes them. You keep your keys.

Non-Custodial Infrastructure Beats Custodial Apps

OTHERS OFFER

- Custodial automation
- Single-purpose schedulers
- Isolated DeFi products

WE PROVIDE

- Non-custodial execution
- Cross-protocol composability
- Developer platform + SDKs
- Full automation stack

We're building **infrastructure** for everyone, products for profit.

Live Protocol, Real Volume, Zero Marketing Spend

Payments is live on Solana mainnet (subscriptions, milestones and pay-as-you-go)

4,000+

PAYMENTS EXECUTED

MARKETING SPEND

95%+

TEST COVERAGE

All before raising capital to build v1 with the composability branch.

A Protocol Fee on Every Automated Transaction

Protocol fee on automated transaction volume.

Every automated action becomes revenue.

- Payments
- DCA
- Treasury operations
- Yield routing
- Agent spending

We scale with transaction flow, not custody risk.

Capital Automation Is the Next Stablecoin Primitive

The next wave of digital money is **capital automation**.

Every dollar moving on-chain will eventually need:

- Rules
- Policies
- Automation

Tributary becomes the **execution layer** underneath that activity.

A \$750M Market With No Solana Incumbent

Bottom-up market sizing (protocol fee revenue @ 10 bps):

\$750M

TAM — ON-CHAIN AUTOMATION FEES

\$112M

SAM — SOLANA'S SHARE (~15%)

\$3.4M

SOM — 3-YR CAPTURE (3% OF SAM)

Assumptions: \$15T global stablecoin settlement/yr (Visa, Chainalysis 2024) × 5% automatable × 10 bps fee; Solana ~15% of stablecoin flow.

Company	Chain	What they automate
DeFi Saver	Ethereum/EVM	Leverage, liquidation protection, yield
Summer.fi	Ethereum/EVM	CDP, borrowing, leverage automation
Instadapp	Ethereum/EVM	Smart accounts, DeFi automation
Enzyme Finance	Ethereum/EVM	Portfolio & vault management

No one operates on Solana.

Composable by Default: One Primitive Reaches Every Protocol

Most competitors automate **a single action inside a walled garden**.

Tributary automates **money across the open chain**.

The **ROUTE** step is composable — the same primitive reaches:

- **Payments** to any merchant or subscriber
- **DCA** via Jupiter and major DEXs
- **Yield** into Kamino, Drift, marginfi
- **Treasury** rebalancing across any token pair
- **Agents** funding any program-controlled wallet

One integration unlocks every money motion on Solana.

A Decade Building Crypto-Native Infrastructure

Fabian Schuh, Dr.-Ing — Founder & CEO

- web3 veteran with **10+ years** building in crypto
- BitShares, Steemit, MakerDAO, Exbet.io, Mash.fun, Repo.trade
- Successfully built products across all of web3
- **4 prior exits**
- Built the entire Tributary stack solo
- Live protocol **before** funding
- [github/@xeroc](#) · [twitter/@xer0c](#) · [linkedin](#)

Unique founder-market fit for this category.

Raising \$250k to Ship V1 Composability

Round: \$250k pre-seed · **Runway:** 18 months

Capital deployed to ship the composable automation branch:

- **Engineering (60%)** — Ship v1 composable `WHEN → PULL → ROUTE` protocol
- **Security & audits (15%)** — Independent audit of the composable branch
- **BD & flagship integrations (15%)** — Onboard 3+ marquee partners
- **Infra & operations (10%)** — Mainnet reliability, keeper network

Milestones unlocked in 12 months:

v1 live · 5+ integrations · \$100k+ monthly volume · category-defining protocol

The Vision

Today: Recurring and programmable payments

Tomorrow: Automated capital allocation

Long term: The operating system for on-chain money

Stablecoins made money internet-native.

Tributary makes it programmable.

Let's Build the Automation Layer for On-Chain Money
